Methodology

WPAi conducted a poll of n = 607 likely Republican primary voters in Alabama. Interviews were conducted using live telephone interviews to cell phones (43% of interviews) and interactive voice response (IVR) calls to landlines from February 18-19, 2020. The survey has a margin of error of $\pm 4.0\%$. Sample was selected from the Alabama voter file with the probability of selection being equal to the probability of voting in the March Republican primary election in WPAi's turnout model. Sample was stratified by age, gender, and geography to ensure accurate representation of the electorate.
