Methodology

WPAi conducted a poll of n = 500 likely Republican primary voters in Nevada. Data was collected by live telephone interviews from March 13-15, 2022. Fifty-five percent (55%) of the interviews were conducted to cell phones with the remaining 45% to landlines. A random sample was selected from the Nevada voter file and was stratified by geography, age, gender, and vote history to ensure a representative sample. The survey has a margin of error of $\pm 4.4\%$ at the 95% confidence level.
